

Today's Cows demand REAL ENERGY!

Merle Frey – Adieu Farms, Waterloo, Ontario

Based on our experience at Adieu Farms, the results that we achieved with High Moisture Ear Corn (Cob Meal) were very disappointing and costly. The production and health of our herd was severely affected by the program that was being promoted by the silo manufacturer at the time we built our storage.

The use of Shelled High Moisture Corn and low moisture haylage is now the basis of an economical and very successful home based feeding program for our dairy today.
